RingCentral Embeddable

RingCentral Embeddable is a web widget that allows you to quickly build workflows with message, video, and phone capabilities with a single line of code.

Enhance video and phone communications for your business needs
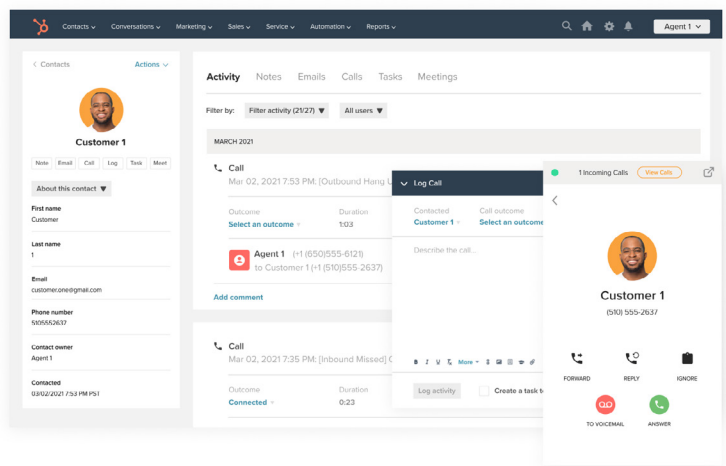

One-click meetings

- Seamlessly click to schedule, click to start, and click to join meetings within your browser or the RingCentral app.

Video recordings

- Record meetings for compliance purposes or to track contents and progress.

Inbound screen pop

- Get a preview of who's calling you before accepting the call or meeting.

- RingCentral Embeddable leverages the browser to pass information and allows users to receive alerts of who's calling.

Why use RingCentral Embeddable?

All-in-one

Use RingCentral Embeddable with your favorite web browser to incorporate message, video, and phone capabilities.

- Message, video, and phone can be added to any Java app or any web app with a single line of code.

- Get ready-to-use RingCentral Video with meeting and recording capabilities.

Faster time to market

Decrease development time by utilizing the RingCentral Embeddable widget for key features such as:

- Building a softphone into your custom CRM or support app
- Click-to-schedule video meetings
- Click-to-dial calls or click-to-send SMS
- Inbound screen pops

RingCentral expertise

RingCentral Embeddable is built with enterprise-grade security and reliability.

Customization

Easily modify or add your custom touch using JavaScript and CSS.

- Increase your flexibility beyond the single line of code with CSS and a full JavaScript API behind it, enabling greater interactions, customization, and tighter integrations.
