

RingCentral for Skype® for Business

Seamlessly integrate your RingCentral communications and collaboration solution with Skype for Business to create a powerful business communications hub.

RingCentral for Skype for Business makes it easy for your teams to access RingCentral's enterprise-grade communications features without ever leaving their native Microsoft® applications, simplifying workflow and increasing productivity.

Seamlessly send and receive calls and SMS messages to any number, start an audio conference with up to 1,000 participants with one click, and easily initiate RingCentral online meetings—all within Skype for Business.

Features

- Make and receive high-quality calls directly within RingCentral for Skype for Business to any local or international phone number, not just your Skype contacts.
- Use RingOut® to easily dial the number of any Skype for Business contact.
- Send and receive SMS texts to individuals or groups right from within RingCentral for Skype for Business, even those outside your Skype contacts.
- Manage active call handling settings: multi-way calls (up to 10 additional parties), one-click call transfers, Call Flip, call recording, and more.
- Manage inbound call controls: send to voicemail, reply with text message, forward, ignore.
- Define your region and set unique outbound caller IDs for individual calls to meet your specific business needs.
- Hold instant, one-click audio conference calls with up to 1,000 participants.
- Enable unique conference bridge access and international dial-in numbers.
- Initiate RingCentral video meetings and easily share your screen with any of your contacts.
- View your complete SMS and message history.
- Set your RingCentral presence status across all endpoints from within RingCentral for Skype for Business.

Benefits

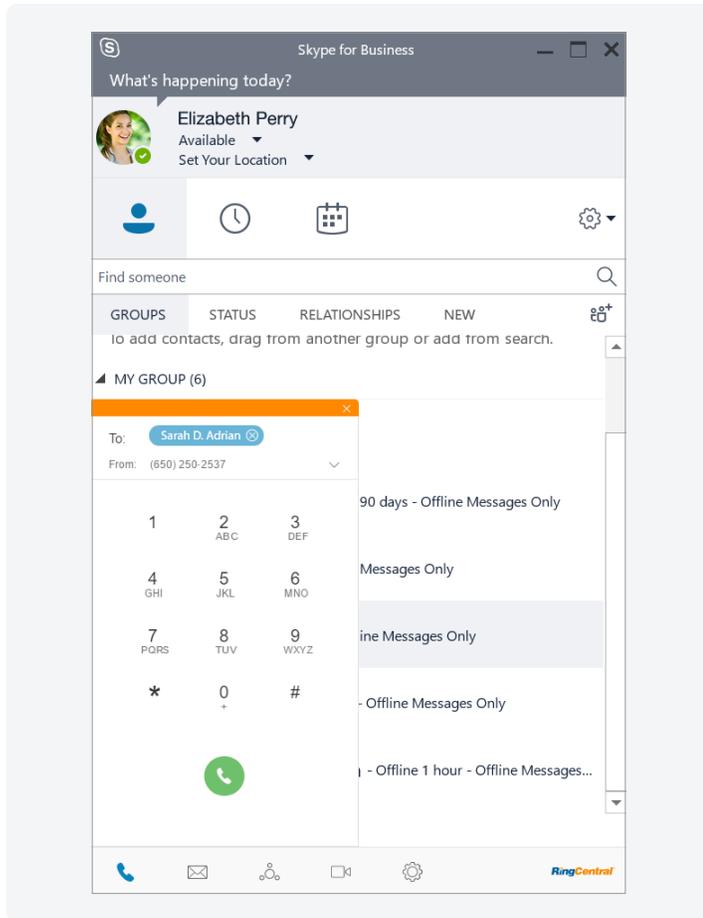

Seamless integration with Skype for Business

Connecting RingCentral with the business applications you use every day allows you to automate tedious tasks in your workflow for added efficiency and ease of use.

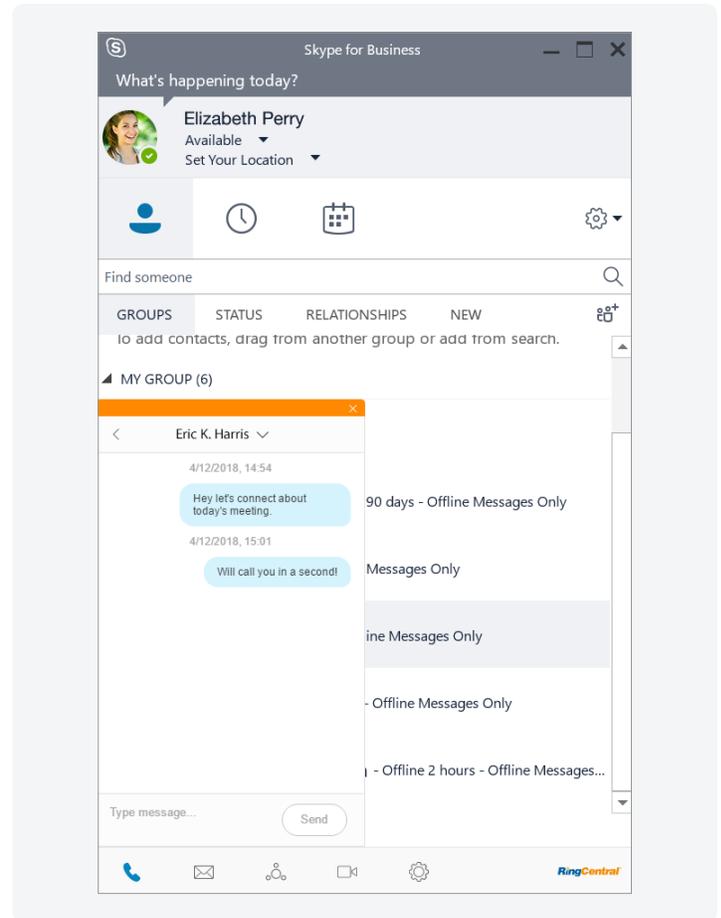

Streamlined business communications

RingCentral for Skype for Business reduces the need for users to turn to other tools while working in their persistent Microsoft applications.

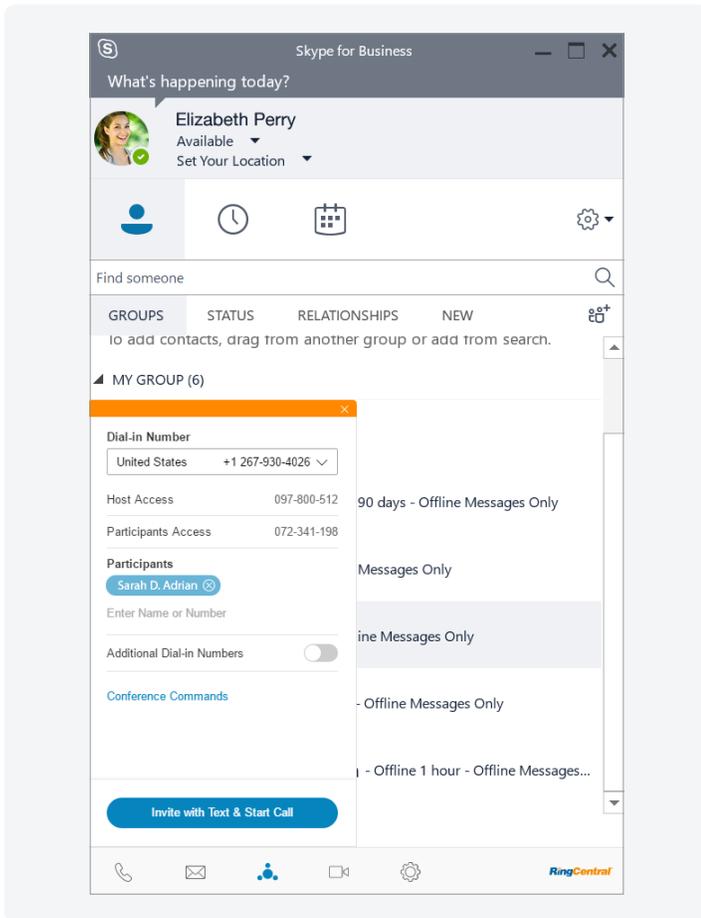

How it works

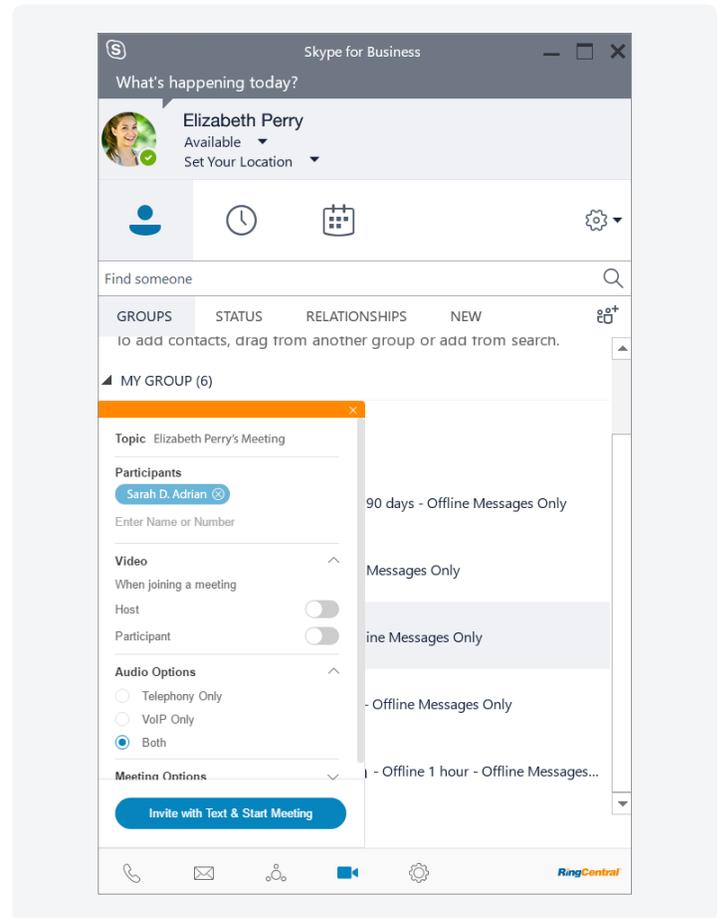

Answer or make calls to any number without switching between your phone and the app. Set up and use unique caller IDs to meet various business needs and define your specific regional settings.

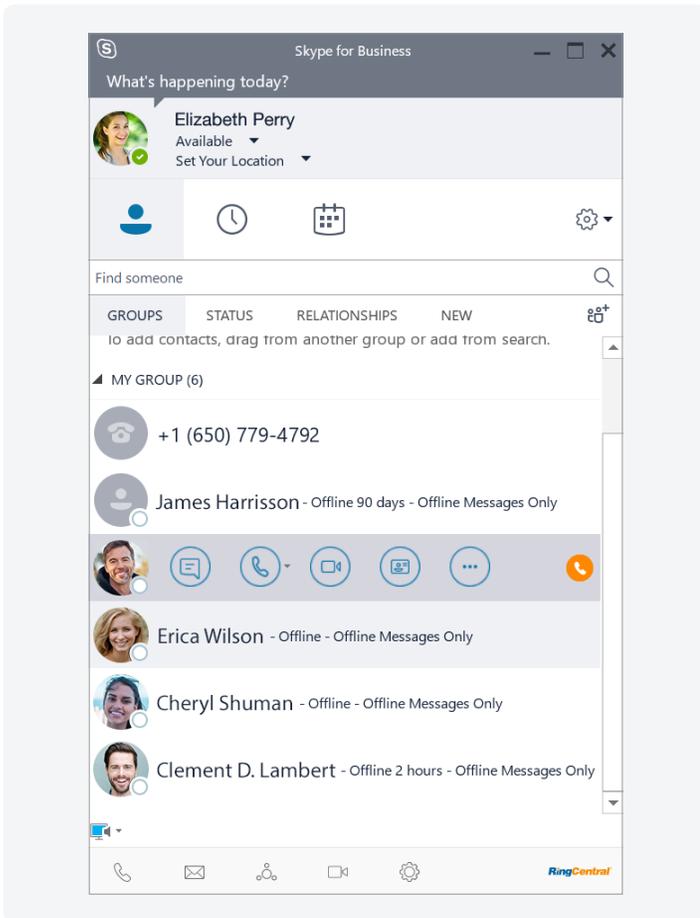

Send an SMS text message to any phone number, contact, or group with one click. You can easily view recent text messages and past conversations within the app.

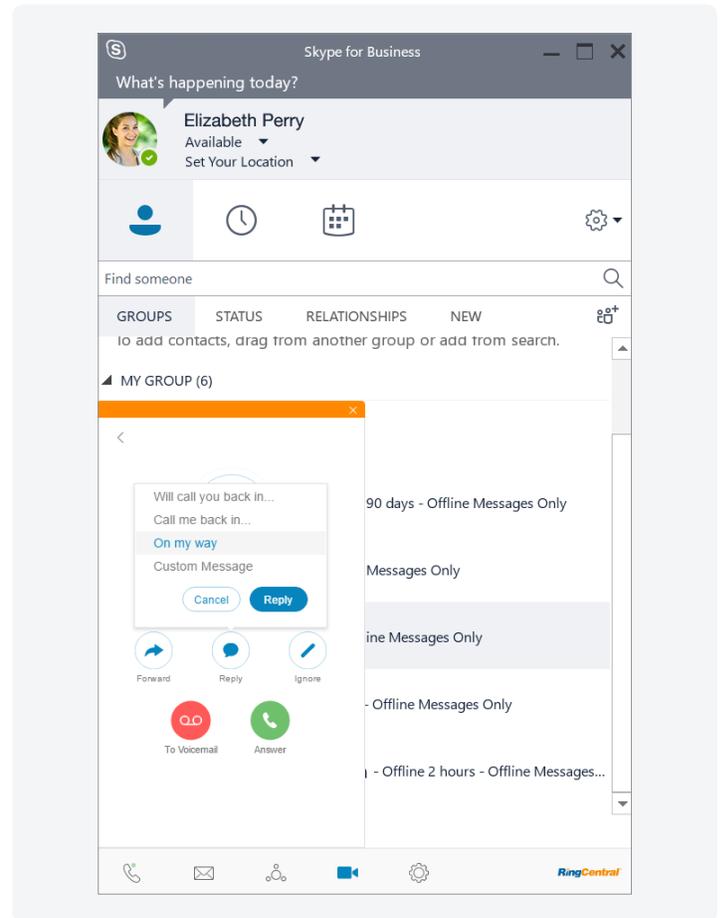

Start an audio conference with up to 1,000 participants with just one click. Invite anyone to an instant audio meeting featuring a unique conference access number. You can even include international dial-in numbers.

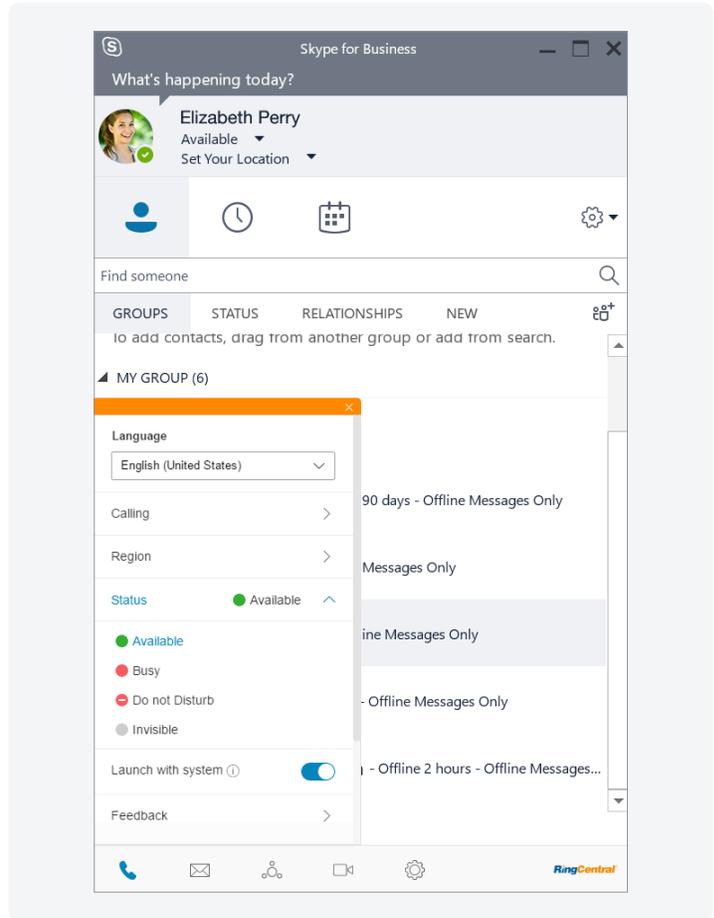

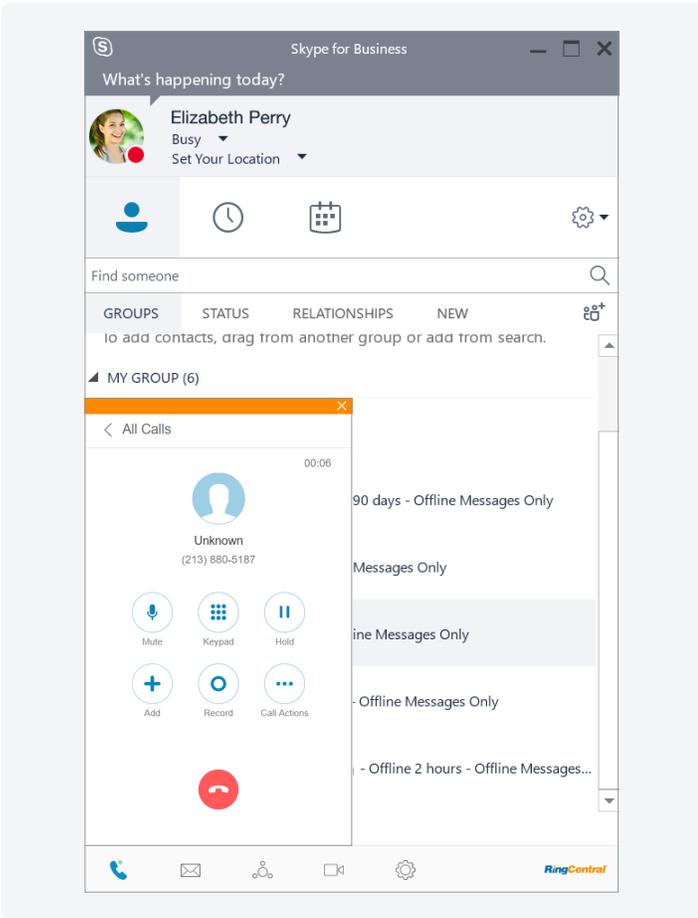

Send an invitation to any phone number or contact to start a screen share or video meeting. Choose to set a meeting password or whether to enable participants to join before the host. Advanced in-meeting features offer further control.

To initiate calls with RingOut, highlight a contact number or name and click on the orange phone icon that appears. A pop-up window will appear with two drop-down lists, one for the number or name of the person you're calling and the other is a phone number you're using. Click Call, and when your phone rings, pick it up and press 1 to connect the call.

Easily answer incoming calls or send them to voicemail, reply with message, forward, or ignore with one click.

Answer, hang up, mute/unmute, hold, transfer, flip, and record calls using the integrated on-screen controls. Start a multi-way call with 10 additional parties with just a few clicks.

Easily set your presence status across all your RingCentral endpoints from within the app settings.

System Requirements:

- RingCentral Office® Standard™, Premium™, or Ultimate™ edition
- PC with Windows® 7 or later (32-bit & 64-bit) or Surface with Windows 10 (64-bit)
