

TELEHEALTH TECHNOLOGY CHECKLIST

Telehealth services offer a number of advantages to healthcare providers. However, you can only deliver telehealth services if you have the right technology infrastructure.

Following this free checklist will help ensure you have all the technology and equipment needed to offer high-quality telehealth services.

- A sufficient number of computers for requisite staff members to deliver telehealth services
- Webcams for each computer via which telehealth services will be offered
- Sufficient telephones (landline or wireless) for each staff member
- A sufficient number of tablets to enable mobile telehealth services
- High-quality microphones or headsets to ensure good sound quality
- The ability to record video and audio conferences for future listening and viewing
- A mobile app for staff members to deliver telehealth services on mobile devices if they're part of a distributed care team
- Access to broadband Internet that supports the transmission of video and audio data
- Encryption to keep sensitive medical information safe and compliant with regulatory requirements
