How to configure your Aastra 6755i phone to connect to your RingCentral account

This guide provides instructions for configuring your phone to connect to RingCentral.

From your phone

Follow these steps to access the phone menu to get your IP address.

1. Turn on your phone using a POE or adaptor.
2. Connect your phone to your LAN line.
3. On your phone, press the icon to open the settings menu.
4. In the menu, select Phone Status, then press Select to continue.

   ![Phone Status Menu]

5. Select IP&MAC Addresses, then press Select to continue.

   ![IP&MAC Addresses Menu]
You’ll see the IP address associated with your phone. Write down the IP address and keep it handy. Click **Done** to exit the menu.

---

**From your computer**

Follow these steps to finish configuring your phone.

1. In your web browser, type your phone’s IP address to go to the Aastra web interface.
2. In the Aastra web login page, use **admin** for the username, and **22222** for the password.
3. In the left menu, select **Advanced Settings > Line 1** to open the configuration page for your phone.
Now you need to get the RingCentral provisioning information for your phone. Open another tab or window in your browser, and log into your RingCentral online account with your administrator credentials.

Under Phone System, in the left panel, click **Phones & Devices**.

Find your phone and select **Setup and Provision**.

Select the **Other Phone** option.

You can now view the provisioning details you’ll need to program in your phone.
Go back to the Aastra web interface. On the Configuration page, enter the corresponding values from your RingCentral provisioning page. See graphic below.

In the Basic SIP Authentication Settings section:

- In both the Phone Number field and Caller ID field, enter the UserName value from your RingCentral provisioning page.
- In the Authentication name field, enter the corresponding Authorization ID.
- In the Password field, enter the corresponding Password value.

In the Basic SIP Network Settings section:

- In both the Proxy Server field and Registrar Server field, enter the matching corresponding SIP Domain value.
- In the Outbound Proxy Server field enter the matching corresponding Outbound Proxy value.
When you’ve entered all the values, click **Done** to save your changes.
