Introduction

Jira Server Add-in for RingCentral app allows users to embed their Jira workflows directly into RingCentral team messaging for a seamless task management experience and communication with co-workers.

Feature overview

For administrators

- Easy installation from within the Apps tab of the RingCentral app.
- Install the Jira Server Add-in to any conversation of choice.

For end users

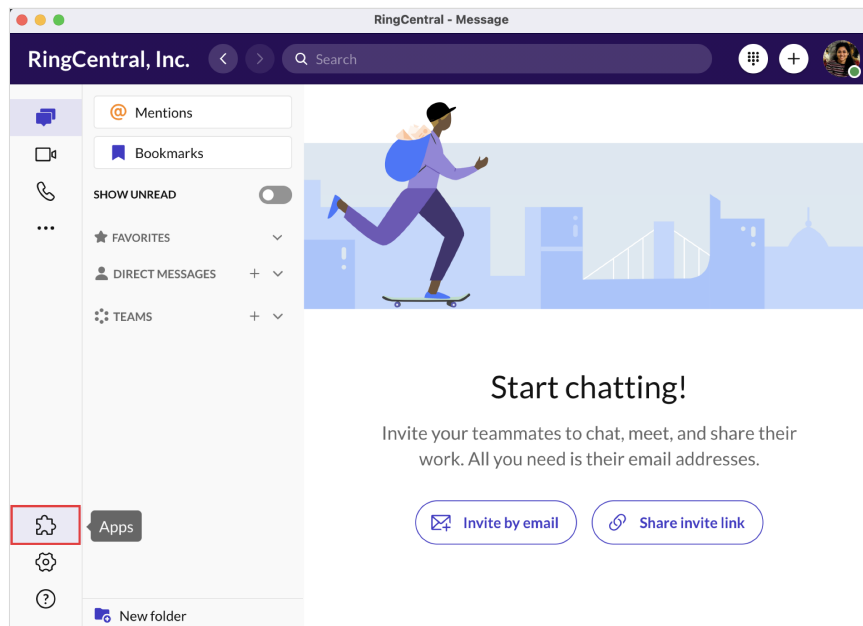

- Receive real-time message notifications of Jira tickets whenever they are created or updated to a conversation of choice.
- Receive notifications in a direct, group, or team message.
- Add comments, change ticket status and due dates with interactive buttons available within the message notifications.
- Manage communication with co-workers and Jira ticket updates from the same conversation.
- Take your work wherever you go, receive Jira notifications on any device including desktop, mobile, or tablet.

System requirements

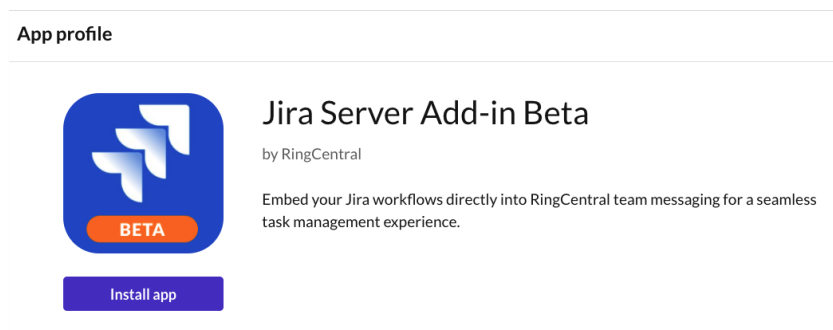

- Users should have a RingCentral MVP account
- Users should have the latest version of the [RingCentral app](#) installed on their devices.
- Users should have **administrator access** to Jira Server or on-premise software or be able to contact their company Jira administrator to install add-in to their RingCentral conversations.
- Users should have a Jira Server or on-premise account to login to the add-in and update their Jira tickets from within the RingCentral app.

Installation (for Jira administrator)

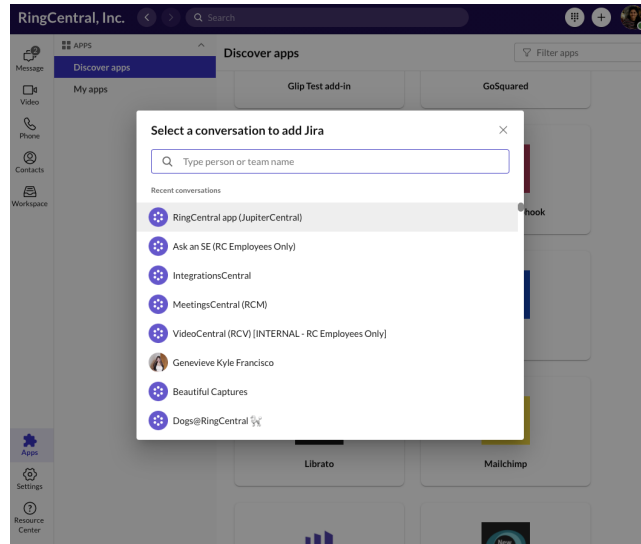

1. Navigate to the Apps tab of the RingCentral app

2. Search for Jira Server Add-in

3. Select 'Install app' and select the conversation where you would like to receive the Jira ticket updates.

4. Once a conversation is selected, enter your Jira web address (Example: <http://jira.mycompany.com>).
Login to your Jira Server on a web browser and follow the steps mentioned in the RingCentral app to link your Jira Server and RingCentral conversation using webhooks.

Set up Jira Server Add-in

App will be added to:
Integration Development - Google

Embed your Jira workflows directly into RingCentral team messaging for a seaml...

Confirm your Jira Server's web address

Enter the web address you use to access your Jira Server instance

To set WebHook, follow these steps:

1. Sign in to your Jira Server as an administrator.
2. Select the gear icon in the upper-right corner and choose "System" from the Settings menu.

[Having trouble? Set up manually](#)

Cancel
Finish

Important note: Make sure to whitelist RingCentral IP addresses so the add-in can successfully connect to your company's network to post ticket updates. Click [here](#) for guidelines to whitelisting.

5. Before proceeding to Step 6, double-check the following in the Webhook configuration in your Jira Server administration section
 - a. If you have selected your required issue related events to receive in RingCentral app.

Events

Issue related events

You can specify a JQL query to send only events triggered by matching issues. The JQL filter only applies to events under the Issue and Comment columns.

Personal Access Tokens

Personal Access Tokens

Use personal access tokens as a safe alternative to authenticating with username and password. [Learn more.](#)

You haven't created any personal access tokens yet

Personal access tokens are a safe alternative to authenticating with username and password. Create your first token now. See [how to do this](#).

[Create token](#)

10. Next, enter a token name and set the expiry date. Click Create.
If you want the token to never expire and keep you logged into the Jira Sever Add-in, uncheck the *Automatic expiry* checkbox and click Create.

Create a personal access token

Use personal access tokens as a safe alternative to authenticating with username and password.

 Personal access tokens are as important as passwords and should be equally protected.

Token Name *

Number of characters remaining: 40

Permissions

Permission level of personal access tokens is set to the level of access you currently have.

Expiry date

For security reasons, you can set this token to automatically expire. You can't change the expiry date once the token is created.

☒ Automatic expiry

Days until expiry

The token will expire on 20 April 2022.

Create Cancel

Copy the displayed token and paste it back in the login message posted by the Jira Server Add-in in RingCentral app. Click Submit.

New personal access token created

Copy the token and store it in a safe space. You won't be able to see your token once you click **Close**.

 **Jira Server Add-in**

Login to Jira

Go to your [Jira settings](#) to create a new Personal Access Token. When you're done, copy and paste the token in the field below. Then click Submit to continue.

Paste auth token

Note: This is a mandatory step to receive any Jira notifications in this conversation.

Submit

11. A confirmation message for your login will be posted in the conversation. You and other members in the conversation will start receiving the Jira ticket updates.

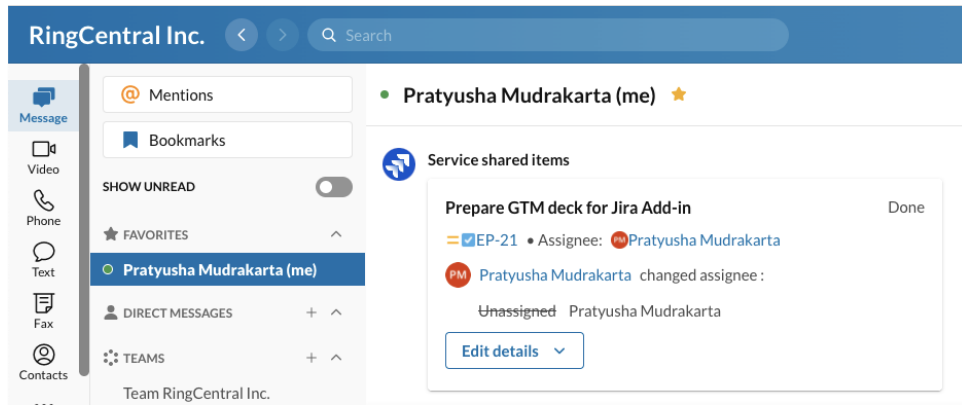

Features in detail

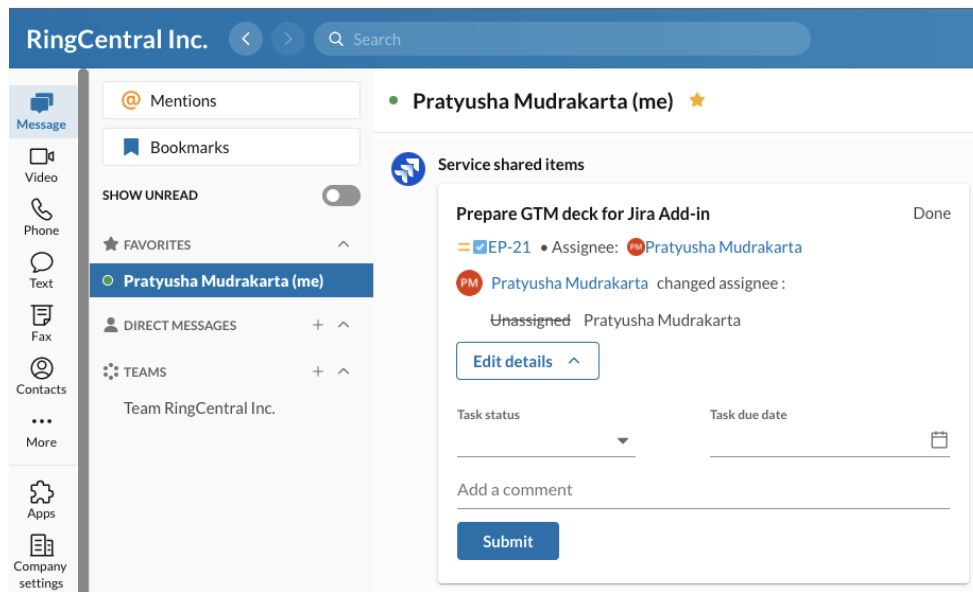

Once installation is complete by the Jira administrator, the Jira Add-in will start posting messages in the selected RingCentral conversation, notifying users everytime an update is made in Jira.

The message notification consist of 2 parts

1. **Part 1:** A collapsed message that displays static information such as
 - a. Jira ticket Summary
 - b. Jira ticket number
 - c. A link to the Jira ticket
 - d. Ticket type (Task, Epic, Bug, etc.)
 - e. Ticket status
 - f. Ticket priority
 - g. Ticket assignee
 - h. New change and the user's name who changed it

2. **Part 2:** On selecting the 'Edit details' button, the message expands to displays editable fields such as
 - a. Ticket status
 - b. Ticket due date
 - c. Comment

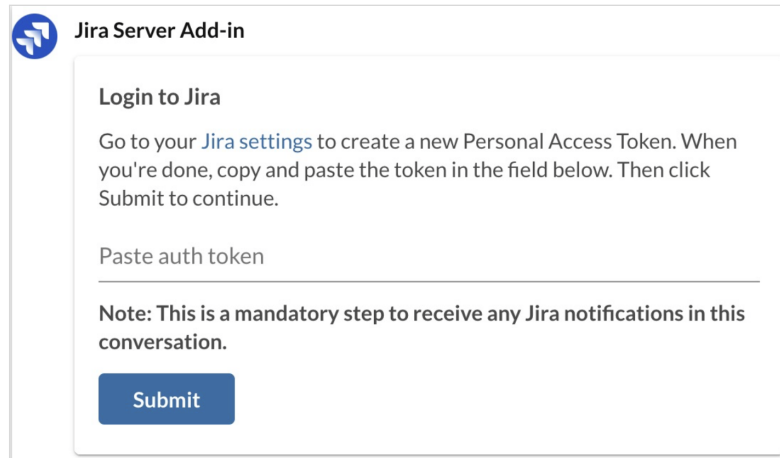

Login to Jira Add-in (for end users)

In order to update the Jira tickets from the RingCentral app using the Jira Server add-in, users need to login.

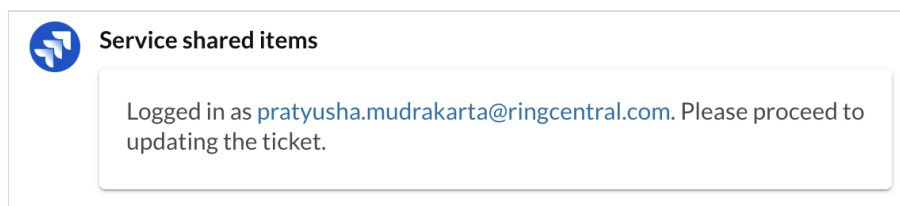

Important note: This step is crucial so the Jira Server add-in can map the user's RC account to their Jira account and correctly push the update back to their Jira account.

1. When a user is not logged into the Jira Add-in and tries to update one of the fields, the add-in will post a message as such

The image shows a message box from the 'Jira Server Add-in'. It has a blue header with the Jira logo and the text 'Jira Server Add-in'. The main content area is titled 'Login to Jira' and contains the following text: 'Go to your [Jira settings](#) to create a new Personal Access Token. When you're done, copy and paste the token in the field below. Then click Submit to continue.' Below this text is a text input field with the placeholder 'Paste auth token'. Under the input field is a note: 'Note: This is a mandatory step to receive any Jira notifications in this conversation.' At the bottom of the message box is a blue 'Submit' button.

2. Users need to follow step 9 to step 11 in the previous section to connect their Jira account with the Jira Add-in.
3. After pasting the auth token, select 'Submit'. A confirmation message for your login will be posted in the conversation. The user can now proceed to updating the ticket.

The image shows a message box titled 'Service shared items'. It has a blue header with the Jira logo and the text 'Service shared items'. The main content area contains the following text: 'Logged in as [pratyusha.mudrakarta@ringcentral.com](#). Please proceed to updating the ticket.'

Feature examples

1. Jira Server Add-in posts a notification in user's RingCentral messages when a ticket is created.

created a task

Edit details

- Users can update the due date by selecting the 'Due date' field in the expanded version of the message. Select 'Submit' to post a new message in the conversation confirming the update.

Important Note: Due date is not a default field available in Jira Server. Administrators have to add the field to all the Jira projects so users can update the due date from the Jira Add-in.

FAQ's

1. I do not have administrator privileges for my Jira Server account, can I install the Jira Add-in?

Answer: You could try installing the add-in but since you did not configure the webhook URL or select the issue related events, the Jira Server Add-in would not be able to post Jira ticket updates to your RingCentral conversation. These configurations can only be done by a user with administrator access.

2. I am seeing an error saying unsupported format when I tried adding a comment in my Jira ticket.

Answer: Some of the formats for comments such as image attachments, @mentions and tables are not currently supported by the Jira Server Add-in. To view the comment, please click on the ticket link provided in the message to open the Jira ticket in your browser.

3. I am receiving a lot of Jira ticket updates in my RingCentral conversation that are not relevant to me. What can I do to filter them?

Answer: Your Jira administrator would be able to filter issue related updates relevant to your RingCentral conversation during configuration. They can always go to the administration section → Webhooks to modify them.

Events

Issue related events

You can specify a JQL query to send only events triggered by matching issues. The JQL filter only applies to events under the Issue and Comment columns.
