

Multi-Level Auto-Attendant

RingCentral provides system administrators with the flexibility to simplify inbound call flow configurations through Auto-Receptionist. It is ideal for companies that need economic, efficient, professional call handling.

Imagine a powerful, sophisticated automated voice system that gives more options to your callers for routing incoming calls to the right teams?

With Multi-Level IVR support, you can configure your Auto-Attendant with extended phone menus to let callers self-select how they reach a person or department.

For example, a dentist office provides services to both English- and French-speaking customers, and would like to offer callers a bilingual Auto-Attendant feature based on their language selection. The IT manager can configure two separate voice menus – one in each language – to provide selections such as office hours, appointments and billing.

Let's say a nationwide furniture retailer has five stores located in Birmingham, Cambridge, London, Manchester and Oxford. Each store has its own direct business number and automated menu to serve local customers. To better brand the retail chain, the IT Manager sets up a main freephone number for its Auto-Attendant system, and connects all local phone menus to route incoming calls to stores nationally.

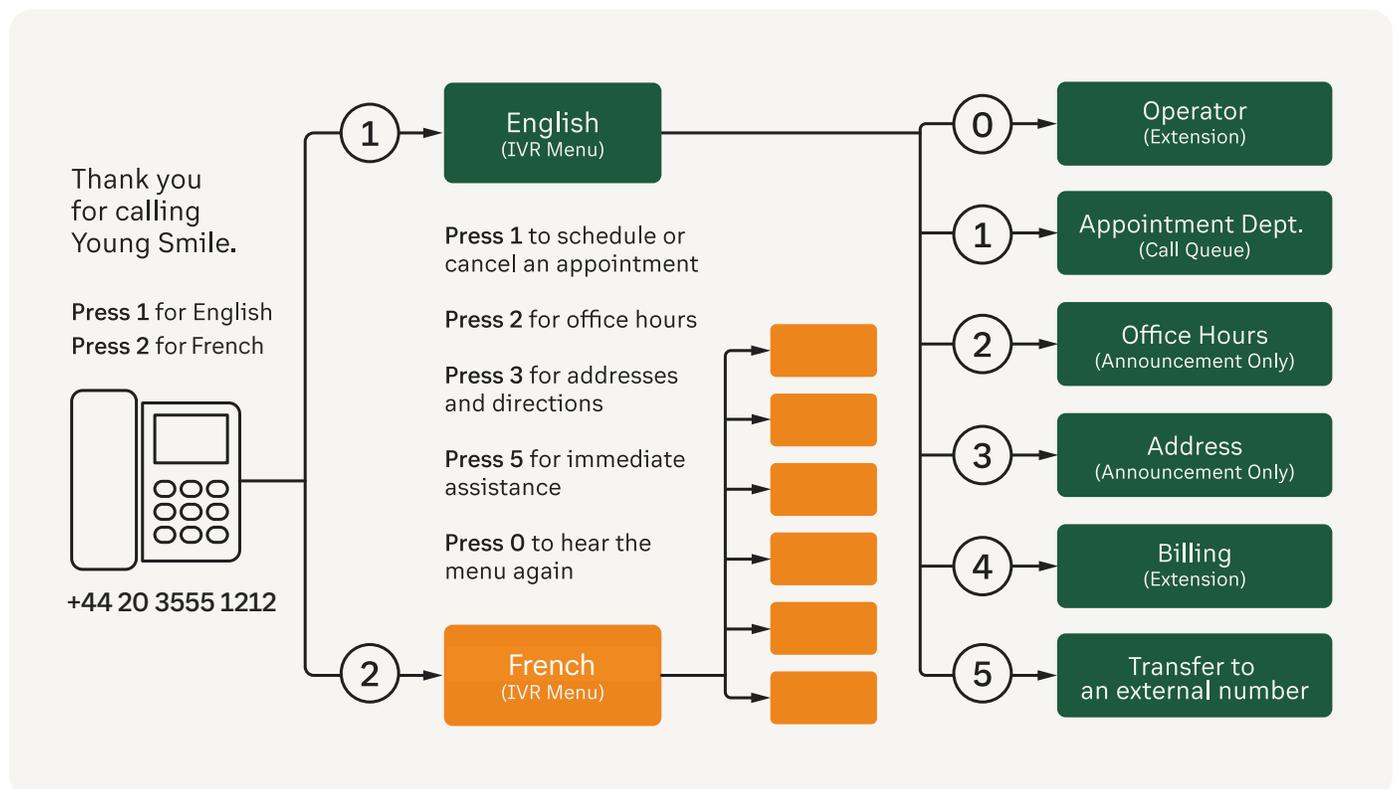

Features & benefits

- Create and implement flexible IVR menus for handling incoming calls.
- Get centralised phone routing management for multiple locations/offices via cloud-based services anywhere, anytime.
- Optionally add a direct number (DID) for each IVR menu independent of the main company call handling.
- Create up to 250 IVR menus per account, including sub-menus.
- Visual flow design allows you to visualise the exact call flow structure and outcome for any stage of the caller journey. Clicks, no code needed.
- Import XML files for quick deployments and bulk changes.
- Easily create IVR prompts with flexible options: text-to-speech, self-record or file import with professional recordings (supported audio files: MP3 and WAV).
- Summarise results of any misconfiguration, such as non-existing extension or missing prompts, with validation function.
- Easily customise inbound call routing and telephone prompts for after-hours and holidays.

See an example of Auto-Receptionist at work

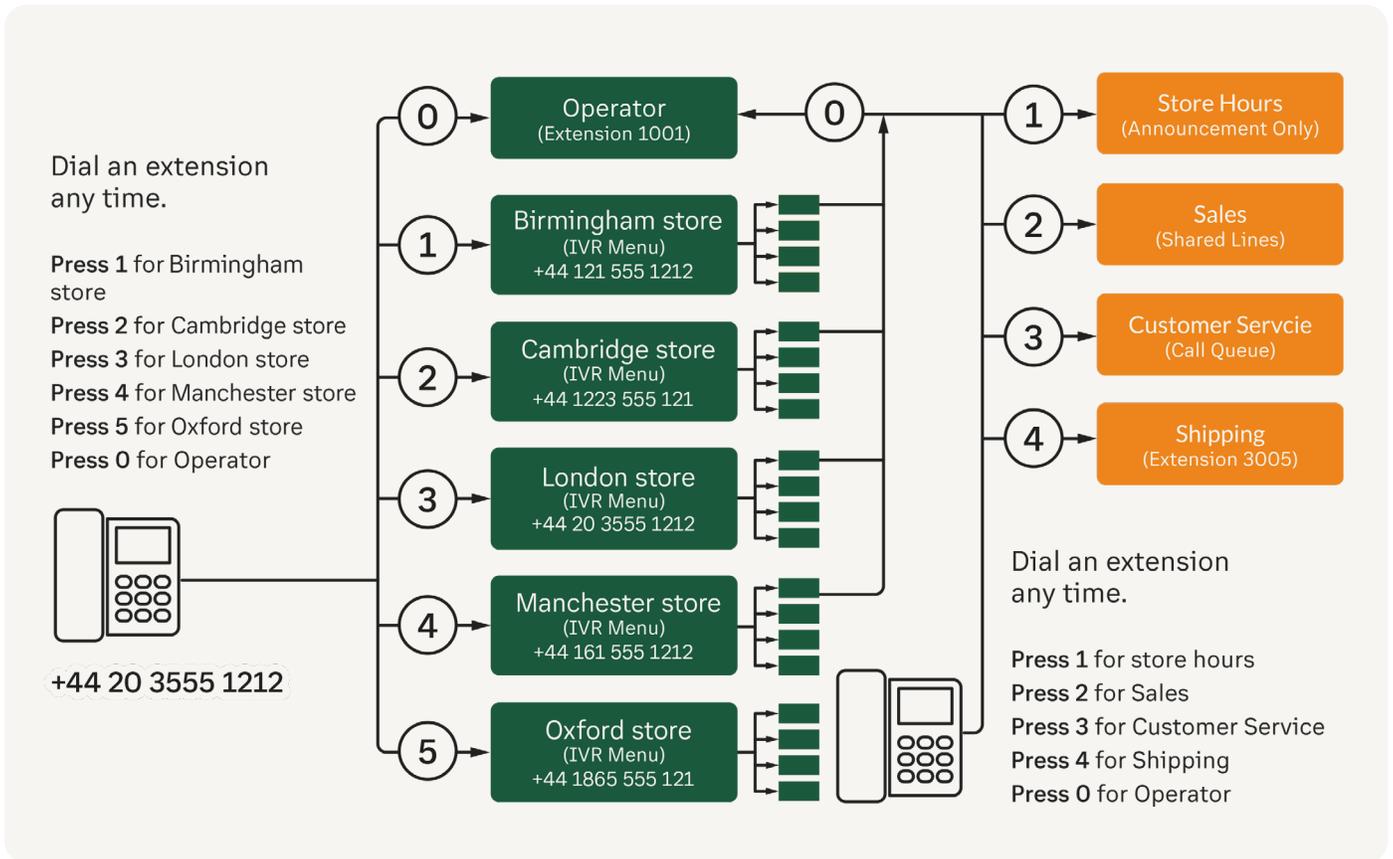

Single location

A local dentist office system is configured to provide services to both English and French-speaking customers, with identical submenus to serve their needs in different languages.

Multiple locations

A nationwide furniture retailer sets up a freephone number for the entire chain to connect callers to a local store for its services and hours.

How it works

RingCentral offers IVR tools to configure phone tree menus, including an easy-to-use Visual IVR Editor, as well as tools to add/manage prompts and import/export XML files.

Company Info » Company Address

Company Address information will be used for publishing to Directory Listing if this service is available for your account.

Company Name: RingCentral

City: London

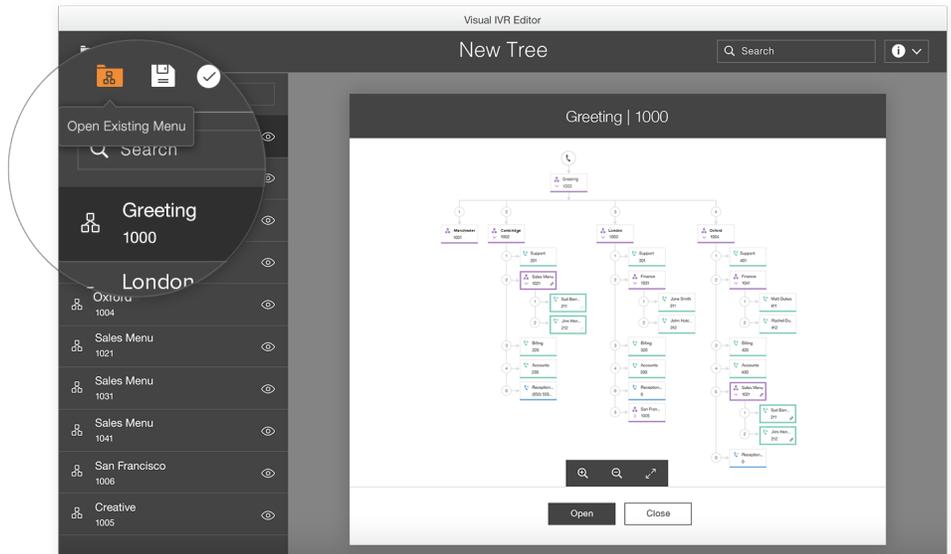

Company Address: 85 Uxbridge Road, 4th Floor

Borough: Ealing

Postcode: W5 5TH

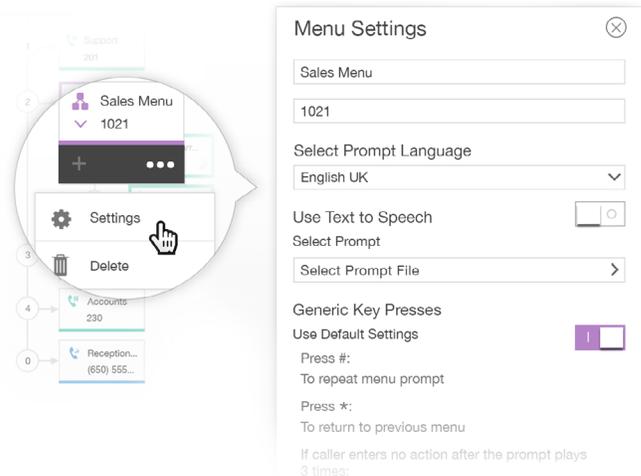

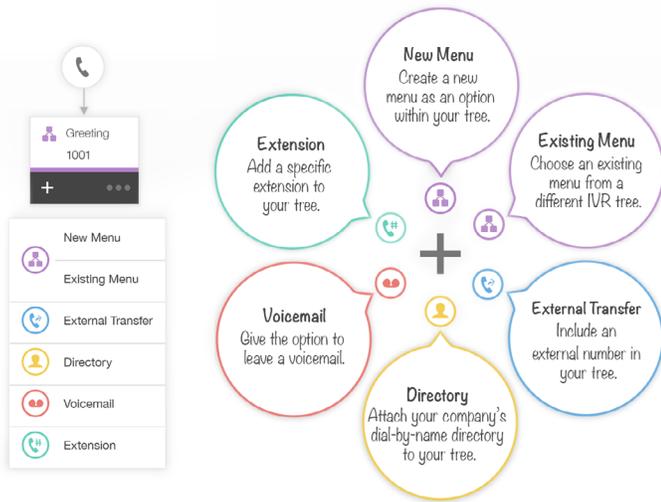

Save

Use the Visual IVR Editor to open an existing menu or create a new one. Click on the IVR menu's names, extension numbers and keys for easy IVR building. It's all drag and drop and clicks – no coding needed.

Click on the + icon to add touchtone number keys to a menu. Number keys allow calls to be routed to a number of destinations: a company directory, an extension, another menu, a voicemail or an external number, based on the touchtone input.

Configure an IVR menu with pre-recorded prompt, text-to-speech greeting, or a special key settings.

RingCentral, Inc. (NYSE: RNG) is a leading provider of business cloud communications and contact centre solutions based on its Message Video Phone™ (MVP™) global platform. More flexible and cost effective than the on-premises PBX and video conferencing systems it replaces, RingCentral helps employees communicate across devices from wherever they are. RingCentral offers three key products. RingCentral MVP™ combines team messaging, video meetings, internet phone and other functionalities in a single interface. RingCentral Video™, along with its team messaging feature, enables Smart Video Meetings™. RingCentral Contact Centre™ gives companies the tools they need to connect with customers across channels. These are available on an open platform that integrates with hundreds of third-party apps and makes it simple to customise workflows. RingCentral is headquartered in Belmont, California, USA, and has offices around the world.
